Metalldeckensysteme GmbH

Everything from one single source

- Flexible production
- Fast response to requests for quotations
- All parts compatible
- Fast planning and execution
- Short Installation times

Own fied-service staff

- Consultancy on site
- Help in solving problems
- Individual customer consultancy

Modern Machinery

- Precision
- Optimum quality
- High accuracy
- Fast production

Shipping with own vehicles

- Fast and punctual delivery
- Low shipping risk
- Delivery direct to the construction site

Why choose Dobner?

- Large enough to perform demanding and one-off projects in the best possible way
- Small enough to respond fast, flexibly and with no "red tape"

Innovative staff team

- High performance and efficiency
- New ideas and approaches to solving problems
- Receptive to new approaches

Extensive manufacturing penetration and breadth

- Production of customized designs of all types
- Planning, implementation and production from one single source

Ongoing product development

- Products with modern design
- Enviroment-friendly materials
- Constant product improvements

Technical customer service

- Satisfied customers
- Fast response to enquiries and requests for quotations of all types
- Competent persons to contact

Metalldeckensysteme GmbH

COMMUNITY HALL, GÖPPINGEN, GERMANY

Dobner sports strip ceilings

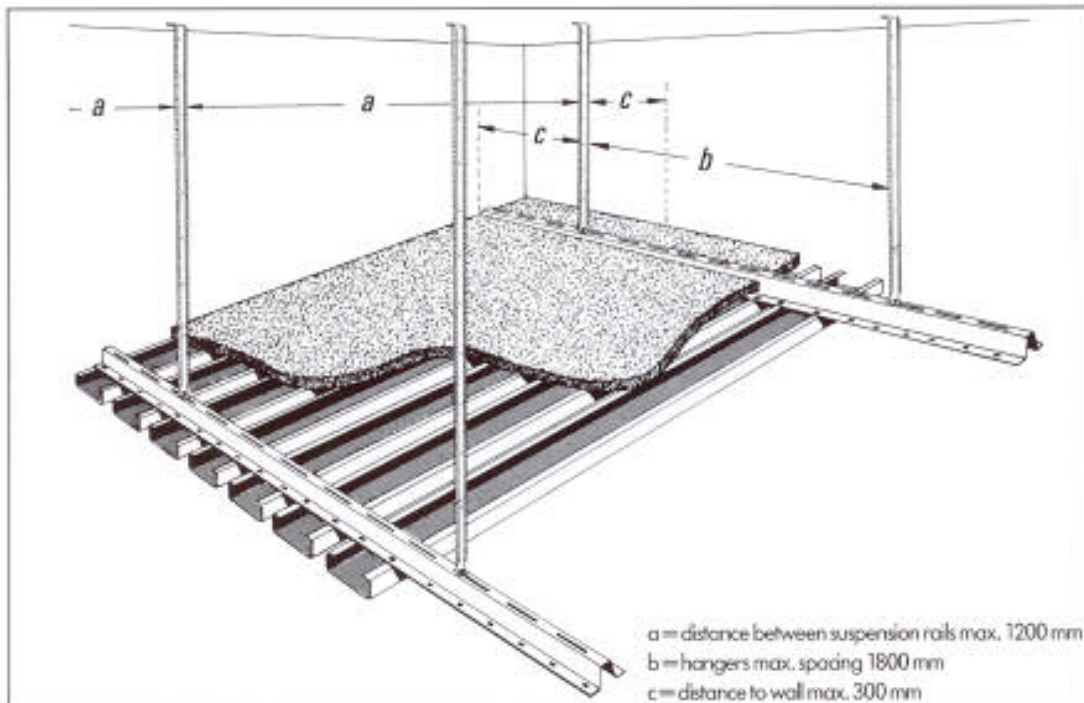

Enameled panels, carrier rails, Nonius brackets, all made of sturdy, galvanised steel plate. All together, they form an unbeatable team for ball-games and championships and for every discipline, league, and fire-power. The though, long-lasting qualities of **dobner sports strip ceilings**, however, make them a reliable sparring-partner in many other places than sports and games halls, places, where conditions are far from sportsmanlike and the walls and ceilings have to be tough enough for any challenge: pedestrian tunnels, shopping acades, or underground railway stations, for instance.

In order to smooth the accoustic waves of rapturous applause and gales of cheering, the panels can be covered with sound-absorption material.

The high technical standard of the system, and the professionally trained technical and commercial customer-service team, ensure that the **dobner sports strip ceiling** takes top place everytime for quality and appearance.

Metaldeckensysteme GmbH

Installation

The sub-structure has to be straight and flat, as with most panel ceilings. The carrier rails must not be allowed to move during installation. When installation is finished, the panels are clamped onto the carrier rail by means of a screw which is screwed into a wooden strip.

The panel securing parts are clipped to the carrier rail between the panels to prevent movement.

Dismantling can start at any convenient point.

Weight

The weight is about 9 kilos / square metre for the ceiling alone, without any attachments.

Sound absorption

Sound-absorbing material, coated black on one side, can be laid on the panels to control the sound level.

Areas of application

Everywhere where the wall and ceiling construction has to be particularly sturdy, such as sports halls, pedestrian tunnels, or recording studios.
